## ATRMx II Variable Angle Horizontal ATR Accessory – *HATR for Inquisitive Minds*

The ATRMax II is a high throughput, variable angle horizontal ATR accessory developed for use in FTIR spectrometers. The design employs a unique optical layout (U.S. patent 5,105,196) which enables samples to be analyzed over a range of incident angles from 25 to 65 degrees. Variable angle of incidence provides experimental control over the depth of penetration of an IR beam into the sample and the number of beam reflections in the ATR crystal, which in turn determines the effective IR beam pathlength for a given experiment. Adjustable angle of incidence allows immediate optimization of measurements for otherwise difficult to analyze samples. The ATRMax can be used for depth profiling studies where spectral composition may be analyzed relative to depth of penetration as the angle of incidence is changed.

*Proprietary beam path within the ATRMax II FTIR sampling accessory.*

### FEATURES

- Selectable angle of incidence – 25 to 65 degrees in one degree increments
- 0.5 to 10 micron depth of penetration – dependent on crystal material, angle of incidence, sample's refractive index and wavelength of IR beam – ideal for depth profiling studies
- 3 to 12 reflections of IR beam – dependent upon angle of incidence – ideal for optimizing ATR sampling methods
- Flat and trough crystal plates for solids, films, powders and liquid samples – optional temperature control for all plates
- Optional, high-pressure clamp for sampling of films, coatings or powdered samples
- Automated option with electronic control module and AutoPRO™ software for high-precision experiments
- Sealed and purgeable optical design to eliminate water vapor and carbon dioxide interferences

*Depth profiling study of silicon release agent using ATRMax II accessory. FTIR spectra collected using Ge crystal flat plates at effective angles of incidence from 25 to 65 degrees.*

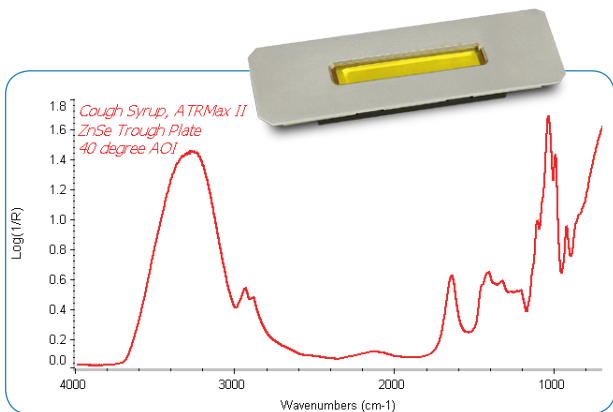

The ATR crystals for the ATRMax II are of trapezoidal shape and 56-mm long, 10-mm wide and 4-mm thick. Standard bevel angles at each end of the crystal are available in 30, 45, and 60 degree versions. Coupling the variable angle of incidence of the ATRMax II with the variable crystal face angles, one can select effective angle of incidence ranging from 25 to 65 degrees and the range in number of reflections from 3 to 12.

Two crystal plate configurations, flat and trough, are available for the ATRMax II. The **flat crystal plate** design is used for the analysis of coatings, films and non-particulate solids. Typical applications include depth profiling studies and optimization of ATR spectral data. A sample clamp is required to provide intimate contact between the sample and crystal surface.

Optimized FTIR spectrum of polymer film run with the ATRMax II at 60 degree angle of incidence.

The **trough crystal plate** is recommended for use with liquids, pastes and powdered samples. Typical applications include the analysis of oils, detergents, and other liquid samples. A volatiles cover and powder press are included with the ATRMax II for use with this crystal plate style.

For special applications where you need to look at coatings on an ATR crystal, PIKE Technologies offers the RCPlate™ option. The RCPlate is designed to enable easy removal and reinsertion of the ATR crystal. Applications include analysis of coatings, monomolecular layers, or bio-films deposited directly upon the ATR crystal. With these RCPlates, it is easy to collect the background spectrum on the clean crystal, remove the ATR crystal from the RCPlate, coat the crystal and then reposition it into the RCPlate to collect the sample spectrum.

A variety of **Flow-Through Cells** are available which feature removable crystals. This enables replacement of the crystals and facilitates cleaning of “sticky” samples. Flow cells may be configured for ambient measurements and heating and liquid jacketed temperature control. With the liquid jacketed version one can measure samples at heated or cooled temperatures using a liquid circulator. PTFE coating of the cell is an option.

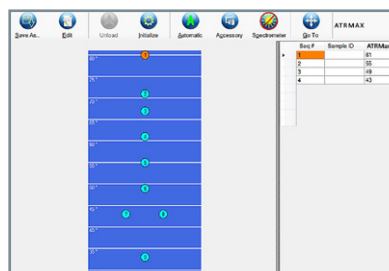

Optional **Resistively Heated Crystal Plates** are available for the ATRMax II trough, flat and flow-through cell versions. These heated crystal plates are driven using the PIKE Technologies’ temperature control module. PIKE TempPRO software is available for graphical setup of ramp and soak temperature profiling studies and interfaces with most FTIR software packages for data collection.

The variable angle of incidence can be controlled manually or with an optional **motorized attachment** for the ATRMax II. Multiple ATR measurements at different angles of incidence can be fully automated with the motorized version and PIKE Technologies’ AutoPRO software. Automation streamlines the collection of spectra from multiple angles of incidence. With the automated ATRMax accessory, the entire experiment can be pre-programmed and executed by the computer. Advantages of the automated ATRMax II system include:

- Computer controlled precision, accuracy and repeatability
- Synchronization of mirror position changes with collection of sample spectra
- Full integration of the PIKE Technologies AutoPRO software with most FTIR spectrometer programs
- Tailor-made, predefined experiments
- “Hands-free” operation

AutoPRO Software control of ATRMax angle of incidence (automated polarizer available) for automated depth profiling studies and ATR experiment optimization.
